

CLAW - Mobile HVM Barrier

The CLAWs protection barrier has been designed to provide protection from hostile vehicles to temporary events like sports, outdoor markets, music festivals, shopping centres, industrial sites, public services and critical infrastructures.

The CLAW protection system has been successfully tested with various vehicles to IWA-14-1 at upto 40mph (64 Km/h)

The barrier is completely surface mounted, and can be deployed in a very short time, to protect a multitude of scenarios.

Claw is completely tamper proof, so does not need guarding like may other temporary solutions, saving cost.

Standards, Testing & Performance

- Full Tested to IWA 14-1:2013 with multiple vehicles
- V 1,500(M1)/64/90: 4.7
- V 3,500(N1) /64/90: 8.2
